Agent Primitives

- To take advantages of Agentic DevOps, you need to have customized primitives
- These primitives are just files!

What are primitives?

- Custom Agents
- Skills / Powers
- Instructions / Steering
- Tools (MCP Servers)
- Prompts
- Hooks
- Plugins

Agent Primitives

MCP Servers

`microsoft/mcp`

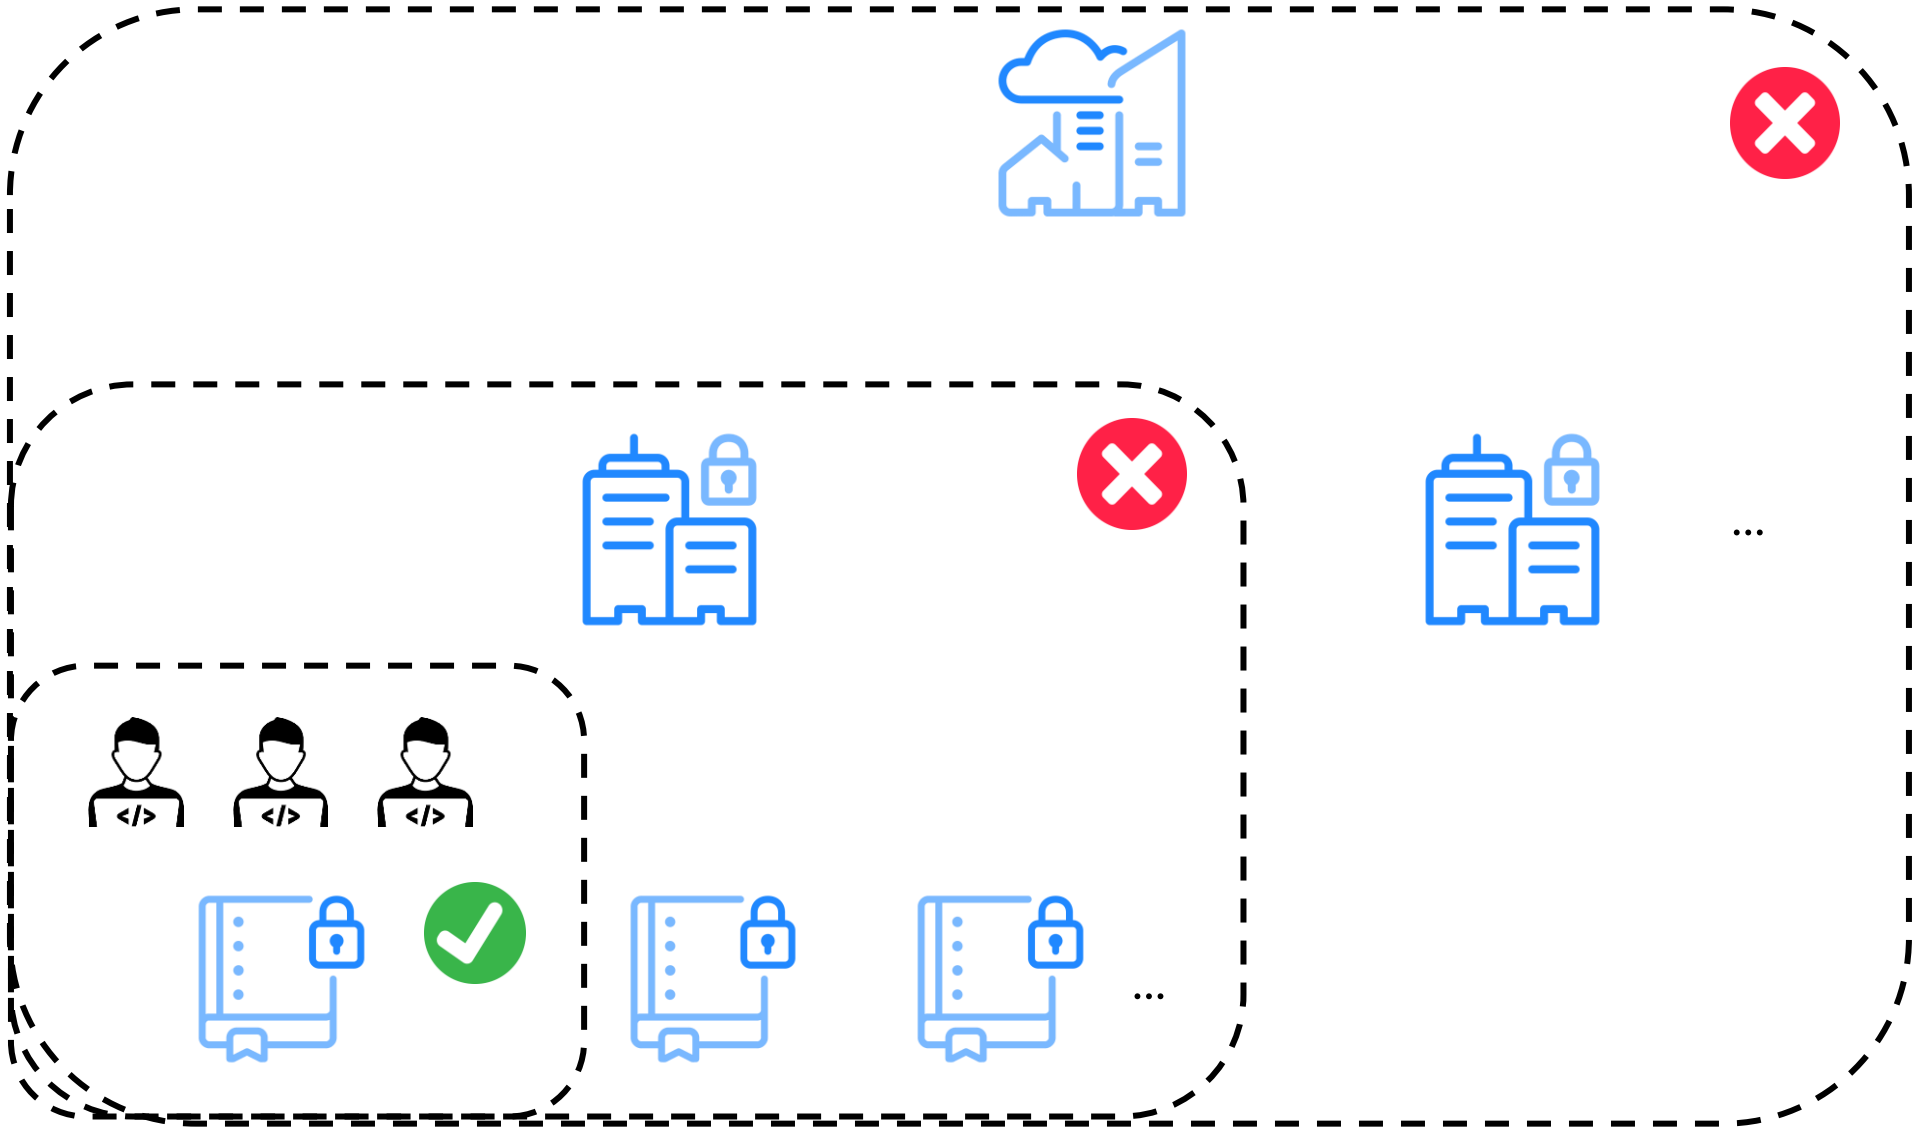
`microsoft/work-iq-mcp`

Agent Skills

`patniko/copilot-sdk-skill`

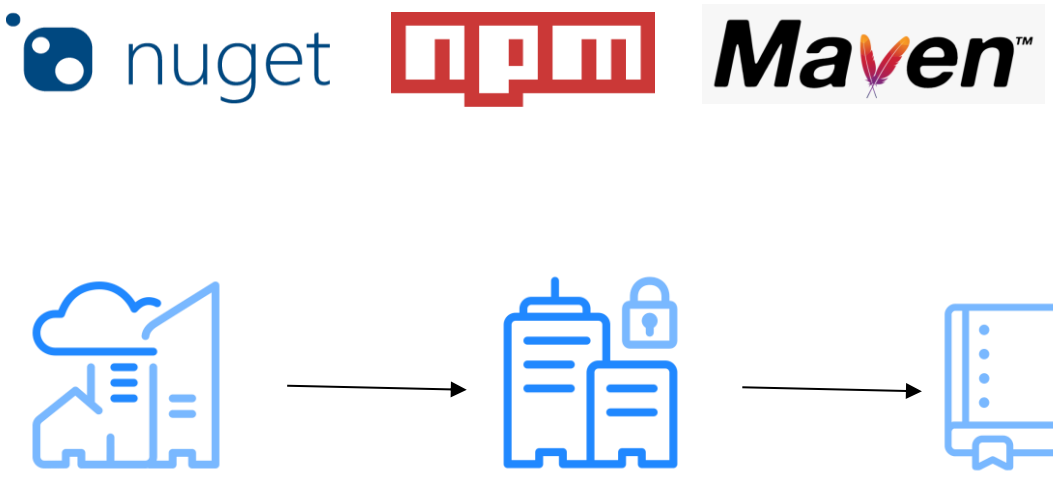
`microsoft/GitHub-Copilot-for-Azure`

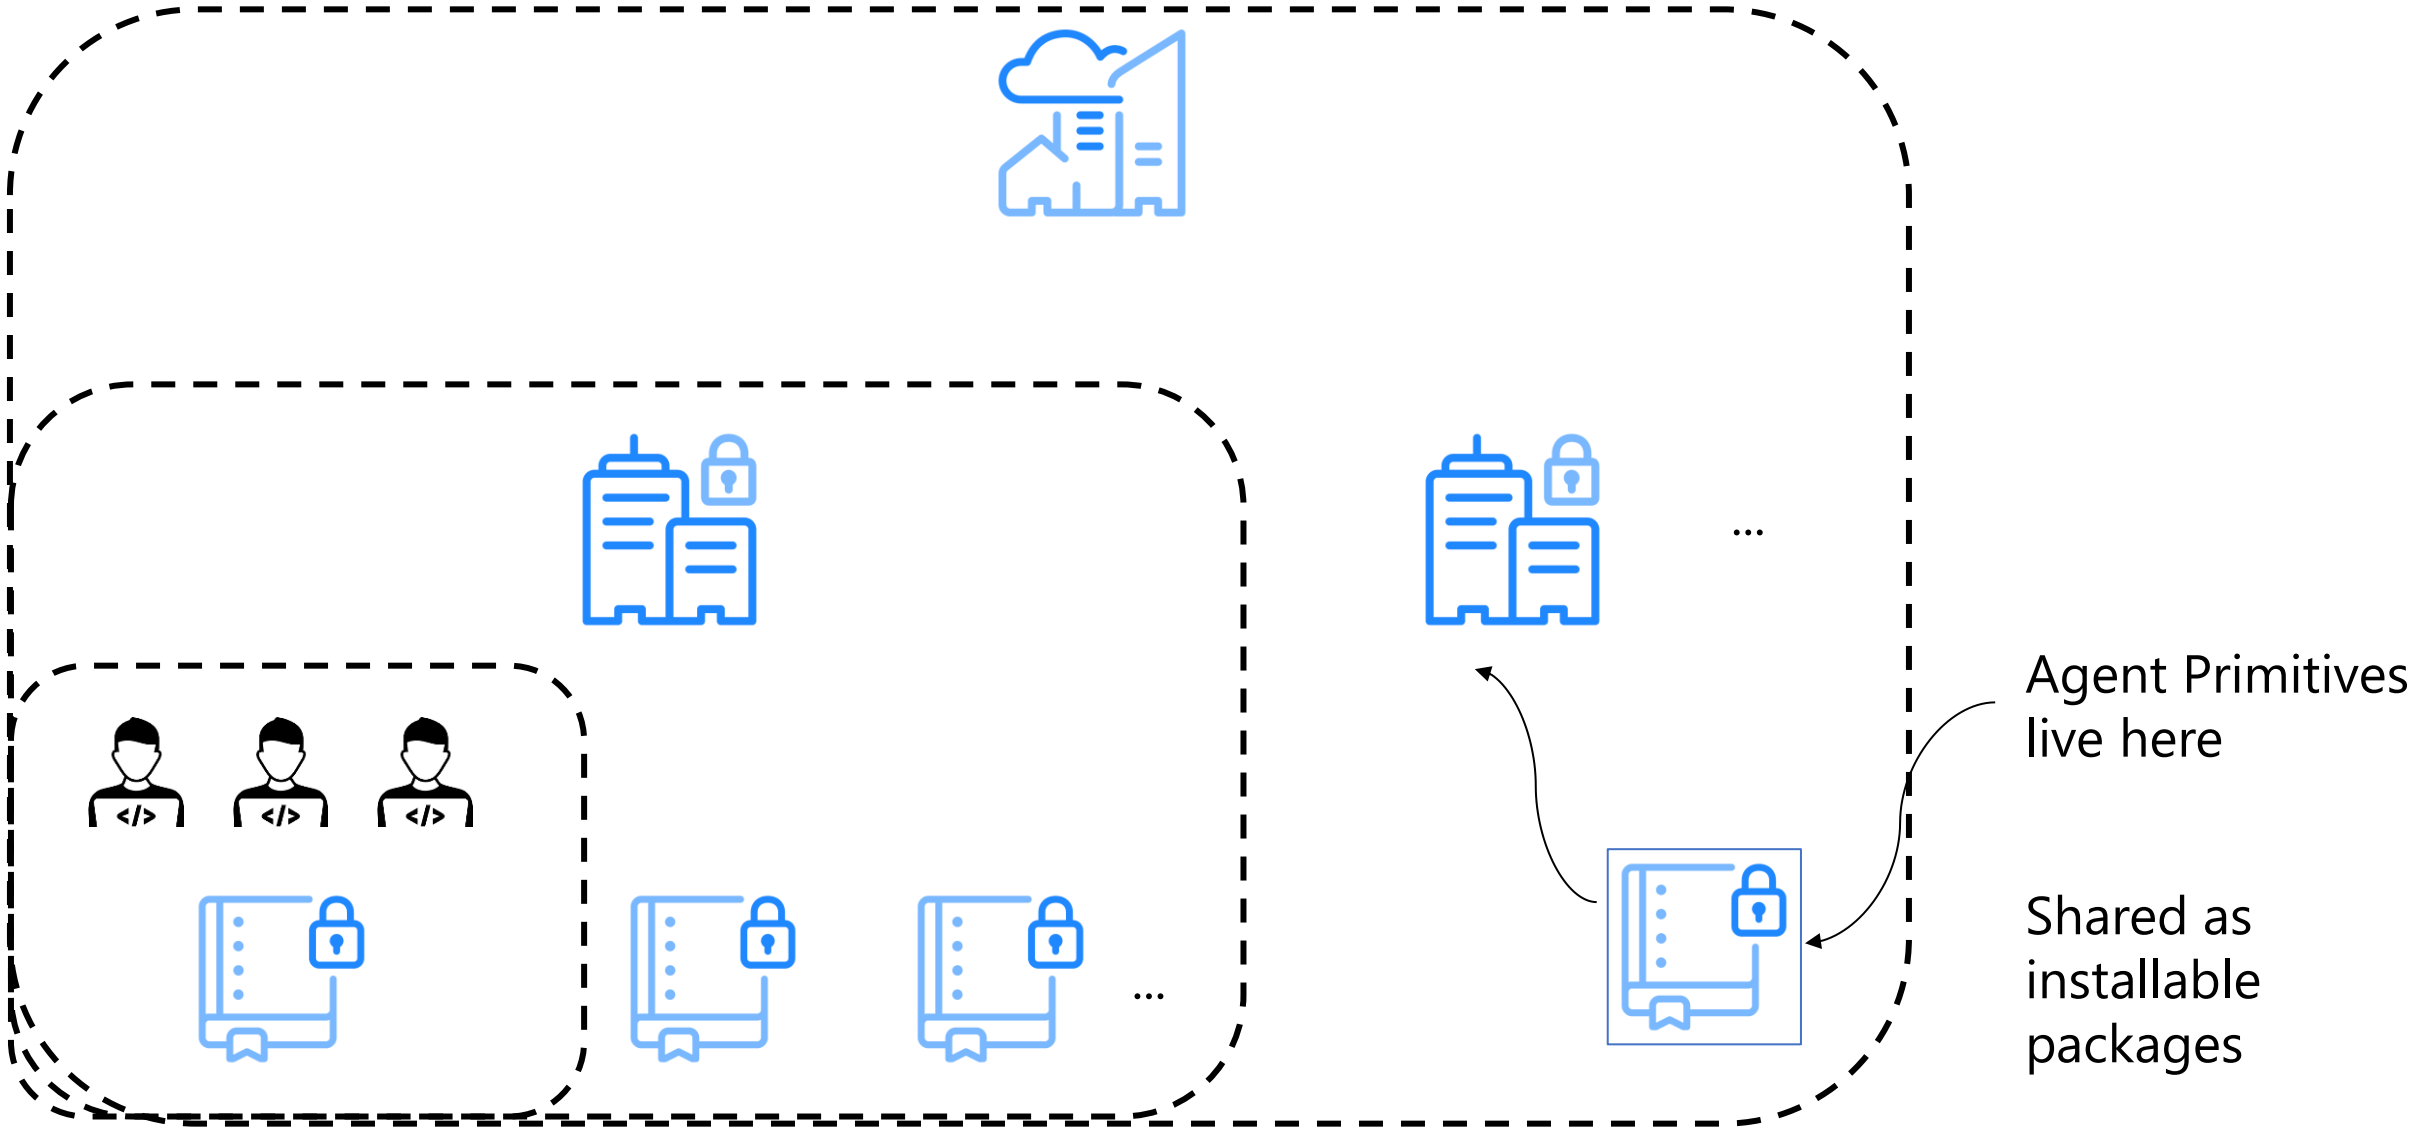
Problem: Scaling these Primitives



Copy/paste these primitives across orgs?

Solution: Packaging Agent Primitives



npm install -> apm install


Agent Package Manager
